TECHNICAL HANDOVER DOCUMENT

Somaiya Ayurvihar

Hospital & Ayurveda Website — Laravel Web Application

Document Type: Developer & Maintenance Handover

Platform: Laravel 12 · PHP 8.2 · MySQL

Prepared: 07 October 2026

Version: 1.0

Document Control

Field	Detail
Project Name	Somaiya Ayurvihar (Hospital & Ayurveda Website)
Application Name	Somaiya Ayurvihar
Document Purpose	Technical handover of the full codebase, architecture, functionality, configuration, and operational knowledge required to maintain and extend the application.
Intended Audience	Incoming developers, technical leads, DevOps / hosting administrators, QA engineers.
Framework	Laravel 12.x
Runtime	PHP 8.2+, MySQL 5.7/8.x, Apache (XAMPP in development)
Document Version	1.0
Date	07 October 2026

Revision History

Version	Date	Author	Description
1.0	07-Oct-2026	Technical Team	Initial handover document covering complete application.

1. Executive Summary

Somaiya Ayurvihar is a content-managed hospital and Ayurveda website built on the **Laravel 12** PHP framework. It consists of two major surfaces:

- **Public Frontend** — approximately 45 public pages presenting hospital information: About, Doctors, Medical Specialities, Wellness / Ayurveda, Health Packages, Blogs, Gallery, Careers, Media Coverage, Insurance, Patient Services, and five enquiry forms.
- **Admin CMS (Backend)** — a password-protected administration panel that manages all website content through CRUD modules (one per content type), with image uploads, priority ordering, status toggles, and enquiry inboxes.

> **At a glance:** The application follows the classic Laravel MVC pattern. Nearly every public page is driven by data entered through the admin panel, making the site fully self-maintainable by non-technical staff once content is loaded.

Key Figures

Metric	Count	Notes
Controllers	68	64 backend/admin + 2 frontend + login + base
Eloquent Models	62	One per content type / entity
Blade Views	246	182 backend + ~55 frontend + components
Public Routes	~45 pages	Plus ~9 AJAX / form POST endpoints
Admin Routes	~55 resource groups	Guarded by auth middleware
Email Templates	11	Admin + user acknowledgement pairs
Tracked Migrations	6	Schema primarily managed directly in DB

2. Technology Stack

Layer	Technology	Version / Notes
Language	PHP	^8.2
Framework	Laravel	^12.0
Database	MySQL	Connection `mysql`, DB `somaiya`
Web Server	Apache	XAMPP in dev; `.htaccess` drives routing
Templating	Blade	Laravel's native engine
Frontend Build	Vite	^7.0 with `laravel-vite-plugin`
CSS Framework	Tailwind CSS	^4.0 (via `@tailwindcss/vite`)
HTTP Client (JS)	Axios	^1.11
Excel Import/Export	maatwebsite/excel	^3.1 — doctor bulk import/export
REPL / Console	laravel/tinker	^2.10
Debugging (dev)	barryvdh/laravel-debugbar	^3.16
Testing	PHPUnit	^11.5 (only example stubs present)
Code Style	Laravel Pint	^1.24

Infrastructure Drivers (from `.env`)

Session Driver	database
Cache Store	database
Queue Connection	database
Filesystem Disk	local
Mail Transport	SMTP (SSL, port 465)
Log Channel	daily
Broadcast	log

3. System Architecture

The application is a standard server-rendered Laravel MVC monolith. Requests flow through Apache → Laravel router → controller → Eloquent model → MySQL, with Blade rendering the HTML response.

Request Lifecycle

1. Apache receives the request. `.htaccess` forces HTTPS, rewrites asset paths into `public/`, and routes all other requests to `server.php` → `public/index.php`.
2. Laravel boots via `bootstrap/app.php` and loads routes from `routes/web.php`.
3. Public routes resolve to `Frontend\HomeController` (page rendering) or `Frontend\FormController` (form processing).
4. Admin routes (prefix `/admin`) pass through the `auth:web` guard and `PreventBackHistoryMiddleware` before resolving to a `Backend\*Controller`.
5. Controllers query Eloquent models, decode JSON fields, and return a Blade view.

Two-Surface Design

Frontend (Public)

- Namespace: `App\Http\Controllers\Frontend`
- Views: `resources/views/frontend/`
- Assets: `public/frontend/assets/`
- No authentication required
- Read-only except for form submissions

Backend (Admin CMS)

- Namespace: `App\Http\Controllers\Backend`
- Views: `resources/views/backend/`
- Assets: `public/admin/assets/`
- Login required (`auth:web`)
- Full CRUD on all content types

Design Patterns & Conventions

- **Resource controllers:** most admin modules use `Route::resource()`, giving standard index/create/store/edit/update/destroy actions.
- **Soft deletion:** records are flagged rather than removed — via the `SoftDeletes` trait (`deleted_at`) and/or a manual `deleted_by` column filtered with `whereNull('deleted_by')`.
- **Audit columns:** many tables carry `created_by` / `modified_by` / `deleted_by` and custom timestamp names (e.g. Doctor uses `modified_at` for `UPDATED_AT`).
- **JSON-in-columns:** repeating structures (FAQs, time slots, social links, gallery images, section headers) are stored as JSON strings in text columns and decoded manually in controllers.
- **Priority ordering:** list modules expose drag/numeric priority with AJAX `updatePriority` endpoints.
- **Status toggles:** many entities have active/inactive flags toggled via dedicated AJAX routes.

4. Directory & Code Structure

Path	Purpose
`app/Http/Controllers/Frontend/`	Public page rendering (`HomeController`) and form handling (`FormController`).
`app/Http/Controllers/Backend/`	64 admin CRUD controllers (incl. `HomePage/` sub-folder for homepage sections).
`app/Http/Controllers/LoginController.php`	Admin authentication, registration, password change.
`app/Http/Middleware/`	`PreventBackHistoryMiddleware` — security headers, CSRF cookies, session timeout.
`app/Http/Requests/`	`DoctorFormRequest` — form-request validation class.
`app/Models/`	62 Eloquent models (one per entity).
`app/Imports/` & `app/Exports/`	`DoctorsImport` / `DoctorsExport` — Excel bulk operations.
`app/Providers/`	`AppServiceProvider` — service bindings.
`routes/web.php`	All HTTP routes (public + admin). Single route file.
`resources/views/frontend/`	Public page templates + `emails/` subfolder (11 mail templates).
`resources/views/backend/`	182 admin panel templates, grouped by module.
`resources/views/components/`	Shared `head` / `header` / `footer` / `sidebar` / `main-js` for both frontend & backend.
`config/`	Standard Laravel config (app, auth, database, mail, session, queue, cache, logging, filesystems, services).
`database/migrations/`	6 migrations (users, cache, jobs, donations, 2 column additions).
`public/`	Web root: `index.php` , `frontend/` & `admin/` asset bundles, `uploads/` (user content), `robots.txt` .
`storage/`	Logs, compiled views, sessions, file cache.

> **Note on repository hygiene:** The repository currently tracks the `vendor/` directory and several backup artifacts (`composer.json_bkp` , `composer.lock_bkp` , `vendor_bkp/` , `error_log` , `public/htaccess1`). These are normally excluded and inflate the repo. See §15.

5. Environment & Configuration

Configuration is driven by the `.env` file (not committed to Git). The key settings below must be reviewed when moving between environments.

Application

Key	Dev Value	Production Guidance
`APP_NAME`	Somaiya Ayurvihar	Same
`APP_ENV`	local	**production**
`APP_DEBUG`	true	**false** (critical)
`DEBUGBAR_ENABLED`	true	**false**
`APP_URL`	http://localhost	Live HTTPS domain
`APP_KEY`	(set)	Must be unique per environment

Database

Connection	mysql
Host / Port	127.0.0.1 : 3306
Database	somaiya
Credentials	Stored in `.env` (`DB_USERNAME` / `DB_PASSWORD`) — rotate for production.

Mail (SMTP)

Host	mbihosting.in
Port / Encryption	465 / SSL
From Address	noreply@mbihosting.in
Recipients	Admin forms notify `opd@somaiya.edu` (cc `snehal.kawde@somaiya.edu`); donations notify `medicalsupdt@somaiya.edu`

> **Security:** Mail and DB credentials currently live in `.env` . Ensure the production `.env` is server-only, never committed, and that SMTP credentials are rotated if the file has ever been shared.

6. Database & Data Model

The database is named `somaiya` and contains roughly 60+ tables, one per content entity, plus Laravel system tables (users, sessions, cache, jobs, failed_jobs). Each content model maps to its own table.

> **Important — Schema is DB-first:** Only 6 migration files are tracked, but there are 62 models. The schema was built largely *directly in the database* (e.g. via phpMyAdmin), not through migrations. This means a fresh `php artisan migrate` will **not** reproduce the full schema. A database dump (`.sql`) is required to stand up a new environment. **Obtain and store a current DB export as part of this handover.**

Entity Groups

Domain	Representative Models / Tables
Medical Structure	MedicalServiceMasterCategory, MedicalServiceCategory, MedicalServiceSubCategory, Specialities, Category, KjshSubCategory
Doctors	Doctor (table `doctors`), ManageServiceDetail, ManageDiagnosticDetail
Homepage	HomeSlider, AwardsDetails, CompassionDetails, TestimonialDetail, FooterDetail, VirtualTour
About Us	AboutIntro, VisionMission, ManageChairmanMessage, ManageAssociation, ManagePrayer, ManageManagementTeam, ManageAccreditations, CsrSustainability, CommunityOutreach
Wellness	ManageAyurveda, ManageAlternateTherapy, ManageHealthPackages, ManageHealthPackagesDetails
Content / Media	Blog, BlogDetails, Gallery, GalleryDetail, Announcements, AnnouncementDetails, ManageMediaCoverage, Testimonial
Careers	CareerPage, CareerListing, CareerDetails, CareerApplication
Patient Services	InpatientService, VisitorGuide, RightsResponsibility, ConvenienceFacility, Governmentschemes, BillingProcess, Insurance, InsuranceCompany, BiomedicalWaste
Awards	AwardsQuality, AccoladesAwards, AwardsImages
Policies	PrivacyPolicy, Disclaimer, TermsCondition
Enquiries (inbound)	HealthCheckupEnquiries, DoctorAppointmentEnquiries, CareerApplication, ContactEnquiry, AyurvedaEnquiry, Donation
System	User, Contact

Key Relationships (example: Doctor)

- `Doctor belongsTo MedicalServiceMasterCategory` (category_id)
- `Doctor belongsTo MedicalServiceSubCategory` (subcategory_id) — the speciality
- `Doctor belongsTo MedicalServiceCategory` (service_id)
- JSON columns: `doctor_time_slot` (availability windows), `social_media_links`

Auxiliary Tables (queried directly via DB facade)

- `ads_pincode_live` — pincode → city/state/country lookup for appointment forms.
- Live search queries hit tables directly: `medical_service_sub_categories` , `medical_service_categorie` , `health_packages` , `doctors` , `gallery_list` , `media_coverages` , `alternate_therapy` , `ayurveda` .

7. Routing Map

All routes are defined in `routes/web.php`.

Authentication Routes (public)

Method	URI	Action
GET/POST	/login	Admin login form & authentication
GET	/logout	Log out
GET/POST	/change-password, /update-password	Password reset flow
GET/POST	/register	Admin account creation

Admin Routes (prefix `/admin`, guarded)

All under `auth:web` + `PreventBackHistoryMiddleware`, named with the `admin.` prefix. Roughly 55 `Route::resource` groups covering every content type, plus supporting endpoints: `toggle-status`, `update-priority`, `toggle-highlight`, `toggle-featured`, and doctor `import` / `import-template` / `upload-images`. The dashboard lives at `/admin/dashboard`.

Public Frontend Routes (selection)

URI	Page
/	Home
/introduction, /vision-and-mision, /chairmans-message, /associations, /somaiya-prayer, /management-team, /csr-sustainability, /accreditations, /media-coverage, /community-outreach	About Us section
/find-a-doctor, /doctor/{slug}	Doctor directory & profile
/health-packages, /details/{slug}, /ayurveda, /alternative-therapies	Wellness section
/gallery, /gallery-details/{slug}, /announcements, /announcements/{slug}	Media & events
/careers, /career-details/{slug}	Careers
/blogs, /blog-details/{slug}	Blog
/specialties, /billing-process, /insurance-and-tpa, /biomedical-waste, /awards-accolades	Footer / info pages
/inpatient-services, /visitor-guide, /rights-and-responsibilities, /convenience-and-facilities, /government-schemes	Patient services
/disclaimers, /terms-and-conditions, /privacy	Policy pages
/contact-us, /thank-you, /search, /search-live	Contact, search
/service/{slug}, /{slug}	Diagnostic & service detail (catch-all)

AJAX & Form Submission Endpoints

Method	URI	Purpose
POST	/health-checkup-submit	Health package booking
POST	/doctor-appointment-submit	Doctor appointment request
POST	/application/submit	Career application (with resume upload)
POST	/ayurveda-submit, /contact-submit, /donation-submit	Ayurveda / contact / donation enquiries
GET	/get-location-by-pincode	Pincode → city/state lookup
GET	/get-doctors-by-speciality	Dependent dropdown
GET	/get-doctor-slots	Available time slots for a date
GET	/search-live	Live site-wide search (JSON)

> **Routing caution:** The final route `GET /{slug}` is a catch-all that maps any unmatched URL to the service-detail page. Keep new specific routes *above* it, and be aware it can mask 404s.

8. Frontend Functional Modules

Handled by `Frontend\HomeController`. Each method queries the relevant model(s), decodes JSON fields, and returns a Blade view. All queries filter out soft-deleted rows.

Module	Functionality
Home	Video slider, featured announcements, awards, compassion block, testimonials (text + video), specialities, virtual tour.
Service Detail	By sub-category slug: service info, FAQs, page headers, section images, linked doctors, related health packages, testimonials.
Diagnostic Detail	By category slug: diagnostic service info, FAQs, images.
Doctor Detail	By doctor slug: profile, qualifications, availability slots, social links.
Find a Doctor	Full doctor listing with speciality filters; merges duplicate speciality names while retaining all IDs for correct filtering.
About Us (10 pages)	Introduction, vision & mission, chairman's message, associations, prayer, management team (priority-ordered), accreditations, CSR, community outreach, media coverage.
Media Coverage	Searchable + filterable by year, month, source (publication), and type.
Wellness	Ayurveda (with Ayurvedic-only packages), alternative therapies, health packages (filter by category/gender/age, paginated, Ayurvedic excluded), package detail.
Gallery	Event listing (search + year filter) and per-event image galleries.
Announcements	Listing filtered by year/month; detail page with "latest" sidebar.
Careers	Career landing (benefits), job listings, job detail pages.
Blogs	Active blog listing (date-ordered); detail page with recent-posts sidebar.
Patient Services	Inpatient services, visitor guide, rights & responsibilities, convenience & facilities, government schemes — each with JSON-driven sub-sections and FAQs.
Info / Footer	Specialities, billing process, insurance & TPA (with company panels), biomedical waste, awards & accolades.
Policy	Privacy policy, disclaimer, terms & conditions.
Search	Search landing page + live JSON search across specialities, services, packages, doctors, gallery, media, therapy, ayurveda.

9. Admin CMS Modules

The admin panel (64 controllers) provides CRUD management for every piece of site content. Modules follow a consistent pattern: list (index) → create/edit forms → store/update → soft delete, with image handling, priority ordering, and status toggles where relevant.

Module Groups

Group	Admin Modules
Menus / Taxonomy	KJSH Category & Sub-category, Medical Service Category / Sub-category / All-Categories (with priority + highlight + status toggles).
Doctors	Full doctor management + Excel import/export, bulk image upload (zip), priority, status toggle.
Homepage	Banner slider, awards, compassion, testimonials, footer details, virtual tour.
About Us	Intro, vision/mission, chairman message, associations, prayer, management team, CSR, accreditations, community outreach.
Wellness	Ayurveda, alternative therapy, health packages + package details.
Media & Events	Gallery + gallery details, media coverages, announcements + details (featured + priority).
Service Pages	Service details, diagnostic/critical details.
Policies	Privacy policy, disclaimer, terms & conditions.
Testimonials	Text/video testimonials with priority + status.
Career	Career page, job listings, job details.
Blogs	Blog posts + details, priority, status toggle.
Footer Pages	Specialities, billing process, insurance, insurance company panel, biomedical waste, quality awards, accolades, award images.
Patient Services	Rights & responsibility, convenience facilities, visitor guide, inpatient service, government schemes.
Enquiry Inboxes	Appointment, health package, career, contact, ayurveda enquiries (read / manage submitted forms).

Common Admin Operations

- **Image uploads** are stored under `public/uploads/<module>/` with sanitised filenames; old images are deleted on replacement.
- **Priority ordering** via AJAX `updatePriority` endpoints (uniqueness enforced in some modules).
- **Status / featured / highlight toggles** via dedicated POST/PATCH routes.
- **Soft deletes** stamp `deleted_by` + `deleted_at`; records are hidden, not erased.

10. Forms & Email Workflows

Handled by `Frontend\FormController`. Each submission follows the same robust pattern: **validate** → **save to database** → **email admin** → **acknowledge user**, wrapped in try/catch with logging.

Form	Stored In	Email Templates
Health Checkup Booking	HealthCheckupEnquiries	health_checkup_admin, health_checkup_user
Doctor Appointment	DoctorAppointmentEnquiries	doctor_appointment_admin, doctor_appointment_user
Career Application	CareerApplication (+ resume file)	career_admin_email (resume attached), career_user_email
Ayurveda Enquiry	AyurvedaEnquiry	ayurveda_admin_email, ayurveda_user_email
Contact Enquiry	ContactEnquiry	contact_admin_email, contact_user_email
Donation	Donation	donation_admin (admin only)

Validation Highlights

- Name fields restricted to letters/spaces via regex.
- Mobile: 10–12 digits; appointment mobile strictly 10 digits; pincode 6 digits.
- Dates validated (birth before today; appointment on/after today).
- Resume upload: PDF/DOC/DOCX only, max 5 MB; stored to `public/uploads/resumes/` with a time-prefixed safe filename.

Supporting AJAX Helpers

- `getLocation` — resolves city/state/country from pincode via `ads_pincode_live`.
- `getDoctors` — returns doctors for a selected speciality (dependent dropdown).
- `getDoctorSlots` — computes bookable slots from the doctor's weekly windows, falling back to hourly 9 AM–9 PM when no window matches the chosen weekday.

11. Authentication & Security

Authentication

- Admin login via Laravel's `Auth::attempt()` against the `users` table (web guard).
- Passwords hashed with bcrypt (`BCRYPT_ROUNDS=12`); session regenerated on login.
- Logout flushes and invalidates the session and regenerates the CSRF token.
- Self-service registration and password change are available (note: open registration should be reviewed for production).

Security Controls in Place

- `.htaccess` forces HTTPS and restricts allowed HTTP methods.
- `PreventBackHistoryMiddleware` sets security headers (X-Frame-Options, X-Content-Type-Options, HSTS, Referrer-Policy, CSP frame-ancestors) and enforces a 1-hour session inactivity timeout.
- CSRF protection via Laravel's default token on all state-changing forms.
- File-upload MIME/type/size validation; zip extraction uses `basename()` to prevent zip-slip.

> **Security items requiring attention (see §15 for full list):**
>
> - **CORS:** the middleware reflects any request `Origin` while also setting `Access-Control-Allow-Credentials: true` — this should be locked to trusted origins.
> - **APP_DEBUG** must be `false` in production to avoid leaking stack traces.
> - **Public uploads:** resumes (PII) are stored in the web-accessible `public/uploads/` and are directly downloadable if the path is known.
> - **Open admin registration** should be disabled or restricted once initial accounts exist.

12. Special Features

Doctor Excel Import / Export

- `DoctorController@downloadTemplate` exports a formatted Excel template (`app/Exports/DoctorsExport.php`).
- `DoctorController@import` bulk-imports doctors (`app/Imports/DoctorsImport.php`), reporting imported/skipped counts and per-row validation errors.
- `DoctorController@uploadImages` accepts multiple images or a ZIP; filenames are matched to the Excel "Image Filename" column.

Live Site Search

`HomeController@searchLive` returns a JSON payload aggregating matches across specialities, services (grouped by master category), packages, doctors, gallery events, media coverage, alternative therapy, and ayurveda — powering an instant-search UI.

Dynamic Appointment Scheduling

Doctor availability is stored as JSON windows (days + from/to). The booking flow resolves selectable slots per chosen date, with an hourly fallback schedule when no specific window applies.

Pincode Auto-fill

Appointment and checkup forms auto-populate city/state/country from the entered pincode using the `ads_pincode_live` reference table.

13. Frontend Build & Asset Pipeline

- **Vite** compiles assets; config in `vite.config.js`. Dev server: `npm run dev`; production build: `npm run build` (outputs to `public/build`, gitignored).
- **Tailwind CSS 4** is integrated via the Vite plugin.
- Pre-built theme assets live in `public/frontend/assets/` and `public/admin/assets/` (template-based UI).
- `.htaccess` applies GZIP compression, keep-alive, ETag removal, and modest cache expiry (images 1 day; CSS/JS 1 week, cache-busted via `?v=filemtime`).
- **Composer scripts:** `composer dev` runs server + queue + logs + Vite concurrently; `composer setup` performs install + key + migrate + npm build.

14. Local Setup & Deployment Guide

Local Development (XAMPP)

1. Clone the repository into the web root (e.g. `c:\xampp\htdocs\somaiya-ayurvihar`).
2. Run `composer install` (if `vendor/` is not vendored).
3. Copy `.env.example` → `.env` and set APP, DB, and MAIL values. Run `php artisan key:generate`.
4. **Import the database dump** (required — migrations alone do not build the full schema). Create the `somaiya` database and import the provided `.sql` file.
5. Run `npm install` then `npm run build` (or `npm run dev` for live reload).
6. Ensure `storage/` and `public/uploads/` are writable.
7. Access via `http://localhost/somaiya-ayurvihar` (frontend) and `/login` (admin).

Production Deployment Checklist

- Set `APP_ENV=production`, `APP_DEBUG=false`, `DEBUGBAR_ENABLED=false`.
- Set the live `APP_URL` and a unique `APP_KEY`.
- Point the document root at `public/` (or keep the root `.htaccess` rewrite in place).
- Configure real DB + SMTP credentials; rotate any shared secrets.
- Run `composer install --optimize-autoloader --no-dev`, then `php artisan config:cache`, `route:cache`, `view:cache`.
- Run `npm run build` and deploy `public/build`.
- Verify HTTPS redirect, mail delivery, file uploads, and admin login.

Operational Notes

- Sessions, cache, and queue all use the database — ensure those tables exist.
- Queue is configured but mail is sent synchronously; if load grows, move mail to queued jobs and run `php artisan queue:work`.
- Logs rotate daily under `storage/logs/`.

15. Known Issues & Technical Debt

Identified during code review. Ordered by priority.

Security High

Issue	Detail & Location
Open CORS with credentials	`PreventBackHistoryMiddleware` reflects any Origin and sets `Allow-Credentials: true`. Lock to trusted origins.
Debug mode risk	`APP_DEBUG=true` / `APP_ENV=local` in `.env` — must be disabled in production.
PII in public uploads	Resumes stored in web-accessible `public/uploads/resumes/`. Move to non-public storage with controlled download.
Redundant CSRF cookies	Seven duplicate `XSRF-TOKEN-*` cookies set with 1-year lifetimes — remove the extras.
Open admin registration	`/register` allows new admin creation without restriction.

Correctness Medium

Issue	Detail & Location
Doctor time-slot save mismatch	`store()` saves JSON-encoded slots; `update()` assigns a raw PHP array. With no model cast this can corrupt slot data on edit.
Missing null guard	`rights_and_responsibilities()` calls `->faq` on a possibly-null record (fatal if table empty), unlike sibling methods.
Unimported exception	`FormController@applicationSubmit` catches `ValidationException` without a `use` import, so that branch never triggers as intended.
Catch-all route	`GET /{slug}` can mask 404s and intercept unexpected paths.

Maintainability Low

- **Schema not in migrations** — only 6 migrations for 62 models; schema reproducibility depends on a DB dump.
- **Inconsistent soft-delete** — mix of `deleted_at` (trait) and manual `deleted_by`; queries vary.
- **JSON decoded by hand** — many columns would benefit from Eloquent `$casts` to remove repetitive `json_decode`.
- **Duplicated validation** — `store()` / `update()` repeat rules; Form Requests under-used (a `DoctorFormRequest` exists but isn't wired in).
- **Debug cruft** — commented `dd()` calls and a large commented-out method remain in `HomeController`.
- **Repo bloat** — `vendor/` and backup files (`*_bkp`, `error_log`, `public/htaccess1`) are committed.
- **No test coverage** — only Laravel's example test stubs exist.
- **No pagination** on most frontend listings (all rows loaded) — monitor as data grows.

16. Recommendations

Immediate (before / at handover)

1. Obtain and archive a current **database dump** — it is the source of truth for the schema.
2. Restrict CORS to trusted origins; remove credential reflection.
3. Confirm production runs with `APP_DEBUG=false`.
4. Move uploaded resumes out of the public web root.
5. Fix the doctor time-slot update encoding bug.

Short term

1. Add Eloquent `$casts` for JSON columns and standardise soft-delete handling.
2. Consolidate validation into Form Request classes.
3. Remove `vendor/` and backup files from version control; add to `.gitignore`.
4. Disable or protect open admin registration.

Longer term

1. Back-fill migrations to make the schema reproducible.
2. Introduce feature tests for forms and critical pages.
3. Add pagination / caching to high-volume listings.
4. Queue outbound email for resilience under load.

17. Handover Checklist

Items to confirm are transferred to the incoming team:

Item	Status
Source code repository access (Git)	☐
Current database dump (`.sql`)	☐
Production `.env` values (DB, mail, keys)	☐
Admin panel credentials (super admin)	☐
Hosting / server access (cPanel / SSH / FTP)	☐
Domain & DNS management access	☐
SMTP mailbox credentials	☐
SSL certificate details / renewal	☐
Third-party accounts (analytics, maps, etc.)	☐
Backup of `public/uploads/` content	☐
This handover document	☑

18. Appendix — File Inventory

Controllers (68)

Frontend: HomeController, FormController. **Auth:** LoginController. **Backend (64):** Category, KjshSubCategory, MedicalServiceCategory, MedicalServiceSubCategory, MedicalServiceCategories, Doctor, HomeSlider, AwardsDetails, CompassionDetails, TestimonialsDetails, FooterDetails, VirtualTour, AboutIntro, AboutVision, ChairmanMessage, Association, Prayer, ManagementTeam, CSRSustainability, Accreditations, CommunityOutreach, Ayurveda, AlternativeTherapy, HealthPackages, HealthPackagesDetails, Gallery, GalleryDetails, ServiceDetails, DiagnosticCriticalDetails, MediaCoverages, ContactUs, PrivacyPolicy, Disclaimer, TermsCondition, Announcements, AnnouncementsDetails, Testimonials, CareerPage, CareerListing, CareerDetails, Blog, BlogDetails, Specialities, BillingProcess, Insurance, InsuranceCompany, BioMedicalWaste, AwardsAccolades, AwardsAccolades1, AwardsImages, RightsResponsibility, ConvenienceFacilities, VisitorGuide, InpatientService, GovernmentSchemes, AppointmentEnquiries, HealthPkgEnquiries, CareerEnquiries, ContactEnquiries, AyurvedaEnquiries (+ HomePage: HomeSlider, Awards, Compassion, Testimonials, Footer, Announcements).

Models (62)

AboutIntro, AccoladesAwards, AnnouncementDetails, Announcements, AwardsDetails, AwardsImages, AwardsQuality, AyurvedaEnquiry, BillingProcess, BiomedicalWaste, Blog, BlogDetails, CareerApplication, CareerDetails, CareerListing, CareerPage, Category, CommunityOutreach, CompassionDetails, Contact, ContactEnquiry, ConvenienceFacility, CsrSustainability, Disclaimer, Doctor, DoctorAppointmentEnquiries, Donation, FooterDetail, Gallery, GalleryDetail, Governmentschemes, HealthCheckupEnquiries, HomeSlider, InpatientService, Insurance, InsuranceCompany, KjshSubCategory, ManageAccreditations, ManageAlternateTherapy, ManageAssociation, ManageAyurveda, ManageChairmanMessage, ManageDiagnosticDetail, ManageHealthPackages, ManageHealthPackagesDetails, ManageManagementTeam, ManageMediaCoverage, ManagePrayer, ManageServiceDetail, MedicalServiceCategory, MedicalServiceMasterCategory, MedicalServiceSubCategory, PrivacyPolicy, RightsResponsibility, Specialities, TermsCondition, Testimonial, TestimonialDetail, User, VirtualTour, VisionMission, VisitorGuide.

Email Templates (11)

health_checkup_admin/user, doctor_appointment_admin/user, career_admin/user_email, ayurveda_admin/user_email, contact_admin/user_email, donation_admin.
